

The background of the slide features a close-up, slightly blurred image of a person's face, likely a woman, looking towards the right. A glowing green ring is superimposed over the image, appearing to be part of a futuristic or technological device. The overall color palette is muted, with greys, blues, and greens, and is overlaid with semi-transparent geometric shapes.

**Corporate Presentation**  
An emerging Australian copper  
producer of scale

17 November 2022

# Important Notice and Disclaimer

The presentation (in this projected form and as verbally presented) ("Presentation") is provided on the basis that none of the Company nor its respective officers, shareholders, related bodies corporate, partners, affiliates, employees, representatives and advisers make any representation or warranty (express or implied) as to the accuracy, reliability, relevance or completeness of the material contained in the Presentation and nothing contained in the Presentation is, or may be relied upon as a promise, representation or warranty, whether as to the past or the future. The Company hereby excludes all warranties that can be excluded by law.

The Presentation contains prospective financial material which is predictive in nature and may be affected by inaccurate assumptions or by known or unknown risks and uncertainties and may differ materially from results ultimately achieved.

The Presentation contains "forward-looking statements". All statements other than those of historical facts included in the Presentation are forward-looking statements. Where the Company expresses or implies an expectation or belief as to future events or results, such expectation or belief is expressed in good faith and believed to have a reasonable basis. However, forward-looking statements are subject to risks, uncertainties and other factors, which could cause actual results to differ materially from future results expressed, projected or implied by such forward-looking statements. Such risks include, but are not limited to, copper and other metals price volatility, currency fluctuations, increased production costs and variances in ore grade or recovery rates from those assumed in mining plans, as well as political and operational risks and governmental regulation and judicial outcomes. The Company does not undertake any obligation to release publicly any revisions to any "forward-looking statement".

The Presentation contains general background information about the Company and its activities current as at the date of this presentation. The information in this Presentation is in summary form only and does not contain all the information necessary to fully evaluate any transaction or investment. It should be read in conjunction with the Company's other periodic and continuous disclosure announcements lodged with the ASX, which are available at [www.asx.com.au](http://www.asx.com.au) and other publicly available information on the Company available at [www.rexminerals.com.au](http://www.rexminerals.com.au).

The Presentation does not constitute an offer, invitation or recommendation to subscribe for or purchase any security and does not form the basis of any contract or commitment.

All persons should consider seeking appropriate professional advice in reviewing the Presentation and the Company.

# Hillside: Investment proposition

Rex Minerals, and its flagship Hillside Project represents a unique, long-life, fully permitted copper project located in a premier mining jurisdiction

Copper - strong leverage to the entire electrification thematic.

1

Fully permitted copper development project  
Of scale in a Tier 1 mining jurisdiction

2

New economics to generate strong cash flows –  
*Optimised Plan being finalised*

3

Project of scale  
multi decade life  
simple and proven mining & processing methods

4

Exploration Upside  
Economic expansion opportunities beyond 20 years

5

Senior and experienced Board and management, with a track-record of successful project delivery

6

# Overview of Rex Minerals

## A Copper Development Opportunity

- Rex owns 100% of its flagship asset, the Hillside Project, a fully permitted copper and gold asset in South Australia
  - Hillside is one of the largest undeveloped copper projects in Australia (2.0Mt copper + 1.4Moz gold resource<sup>2</sup>)
  - Original Feasibility Study<sup>3</sup> for Stage 1, an open-pit mine planning to produce 35ktpa copper and 29kozpa gold annually after year 1.
  - An Optimised and Updated Feasibility and Definition Phase Engineering Study being finalised.
  - New Plan lays foundation for increasing output, and de-risk development and execution stage.
  - Pre Feasibility completed for Stage 2, extending operation life to 30 years
- Rex also owns the Hog Ranch gold project in Nevada (USA), a 2.2Moz<sup>4</sup> epithermal gold resource, a rapidly growing success story

## Capitalisation

Share Price (as at 16 November 2022) (A\$ per share)	\$0.21
Basic Shares (m)	592.8m
<b>Market Cap (undiluted)</b>	<b>~A\$118.5m</b>
Cash (as at 30 September 2022)	\$36.5
Debt	Nil
<b>Enterprise valuation (undiluted)</b>	<b>~A\$82m</b>
Options on Issue (unquoted)	21.1m
Consideration Rights on Issue (unquoted) <sup>1</sup>	15.0m

## Major shareholders (as at 30 September 2022)

<b>Directors &amp; Management</b>	6.5%
<b>Ellerston Capital</b>	8.1%
<b>United Super</b>	8.1%
<b>Grand South Development</b>	2.5%
<b>Curious Capital</b>	0.8%

1. Hog Ranch Consideration Rights convertible to Rex shares upon Board approval to mine Hog Ranch, no later than 31 October 2024.

2. Hillside Project - Mineral Resource and Ore Reserve Update (25 May 2015).

3. Additional Information to Hillside Feasibility Costing Update (31 July 2020).

4. Hog Ranch Gold Resource increases from 1.4Moz to 2.2Moz (23 March 2021).

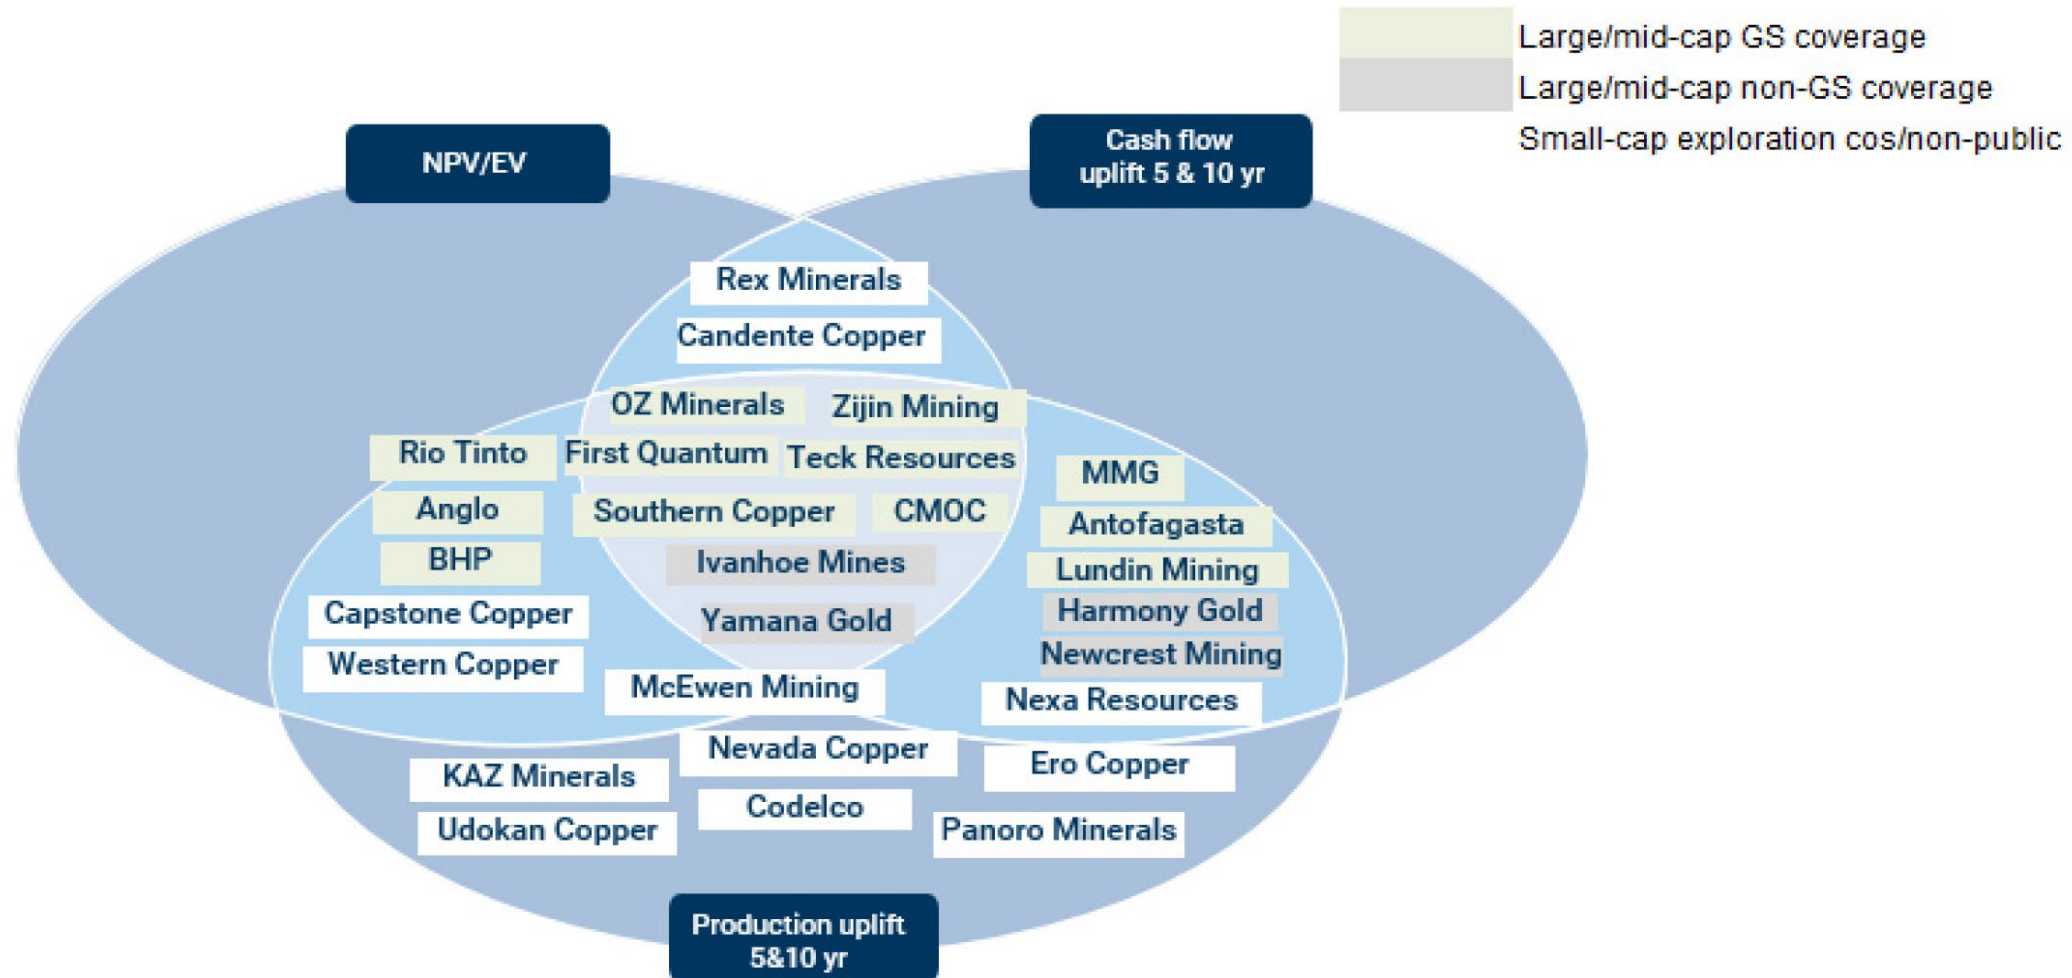

# COPPER TOP PROJECTS 2022

## A Deficit on the Horizon

**With the 10th iteration of our Copper Top Projects report, we analyze the Top 50 projects that are set to form >60% of new copper supply in the next five years and account for c.US\$100 bn of capex.** We highlight key takeaways from our analysis:

**1) Increased incentive price to bring new projects online**, with an average incentive price of US\$9k/t, up c.30% vs 2018, and a marginal incentive price of US\$13k/t to solve an 8mn t deficit by the end of this decade given cost inflation, rising required returns and widespread project delays.

**Exhibit 45: In our Top Projects analysis, the below companies hold some of the highest-quality growth assets**

Source: Company data, Goldman Sachs Global Investment Research

# Rex Minerals: Hillside Copper is our Flagship Asset

## Hillside (100% owned)

- ✓ Permitted – pre-development site work well under way
- ✓ Multi decade operational life underpinned by 988kt contained copper Reserve<sup>2</sup>
- ✓ Simple, open pit mining, with conventional copper floatation processing
- ✓ Second quartile cost curve position<sup>1</sup>
- ✓ To become the 3rd largest permitted reserve in Australia<sup>2</sup>
- ✓ Exposure to electrification and EV trends
- ✓ Robust economics to generate strong cash flows
- ✓ Fully funded until FID (cash balance of ~A\$39m as at 30 Sept 2022)

**An Optimised and Updated Feasibility and Definition Phase Engineering Study being finalised.**

1. Hillside Feasibility Costing Update (31 July 2020). Assumes US\$3.00/lb Cu price, US\$1,550/oz Au price and AUDUSD 0.70.  
 2. Rex doubles Hillside Ore Reserves (20 July 2021).

# Compared to Australian Operating Mines

Only Permitted project NOT owned by the big boys

Asset	Owner	Reserves <sup>1</sup> (Cu, kt, 100% basis)
Olympic Dam		8,683
Carrapateena		2,300
Hillside		988 <sup>2</sup>
Ernest Henry		769
Northparkes		730
Prominent Hill		574
Mt Isa	GLENCORE	462
CSA		262
DeGrussa		72

Nearly finished

1. Based on public information.

2. Rex doubles Hillside Ore Reserves (20 July 2021).

# The relative value proposition – All public domain data

## Benchmarking Hillside against CSA, acquisition 2022.

In March 2022, Metals Acquisition Corp (MAC) announced the acquisition of Glencore's CSA copper mine for US\$1.15bn<sup>1</sup> and a 1.5% net smelter return royalty – *about US \$2/lb of Cu Reserve in the ground.*

### Hillside

### CSA<sup>5</sup>

Commodity	Copper (gold by-product)	Copper (silver by-product)
Mine life	13 years (stage 1) <sup>4</sup> 33 years (stage 2)	15+ years (2036)
Cu Reserves (kt)	988kt <sup>2</sup> ( <b>over ~2 billion lbs</b> )	262kt ( <b>over 0.5 billion lbs</b> )
Cu Resources (kt)	1,967kt <sup>3</sup>	613kt
Production	35ktpa Cu and 24kozpa Au (LOM average)	41ktpa Cu and 372koz Ag (2022E)

1. On 17 March 2022, Metals Acquisition Corp (MAC) announced the acquisition of Glencore's CSA copper mine for US\$1.15bn (including US\$50m of equity in MAC) and a 1.5% net smelter return royalty. The transaction is expected to be completed in 2022, subject to the approval of MAC's shareholders and other customary closing conditions.

2. Rex doubles Hillside Ore Reserves (20 July 2021).

3. Hillside Project - Mineral Resource and Ore Reserve Update (25 May 2015).

4. Hillside Feasibility Costing Update (31 July 2020). Assumes US\$3.00/lb Cu price, US\$1,550/oz Au price and AUDUSD 0.70.

5. All figures sourced from MAC CSA Mine Acquisition Investor Presentation (March 2022).

# South Australia – Copper Coast

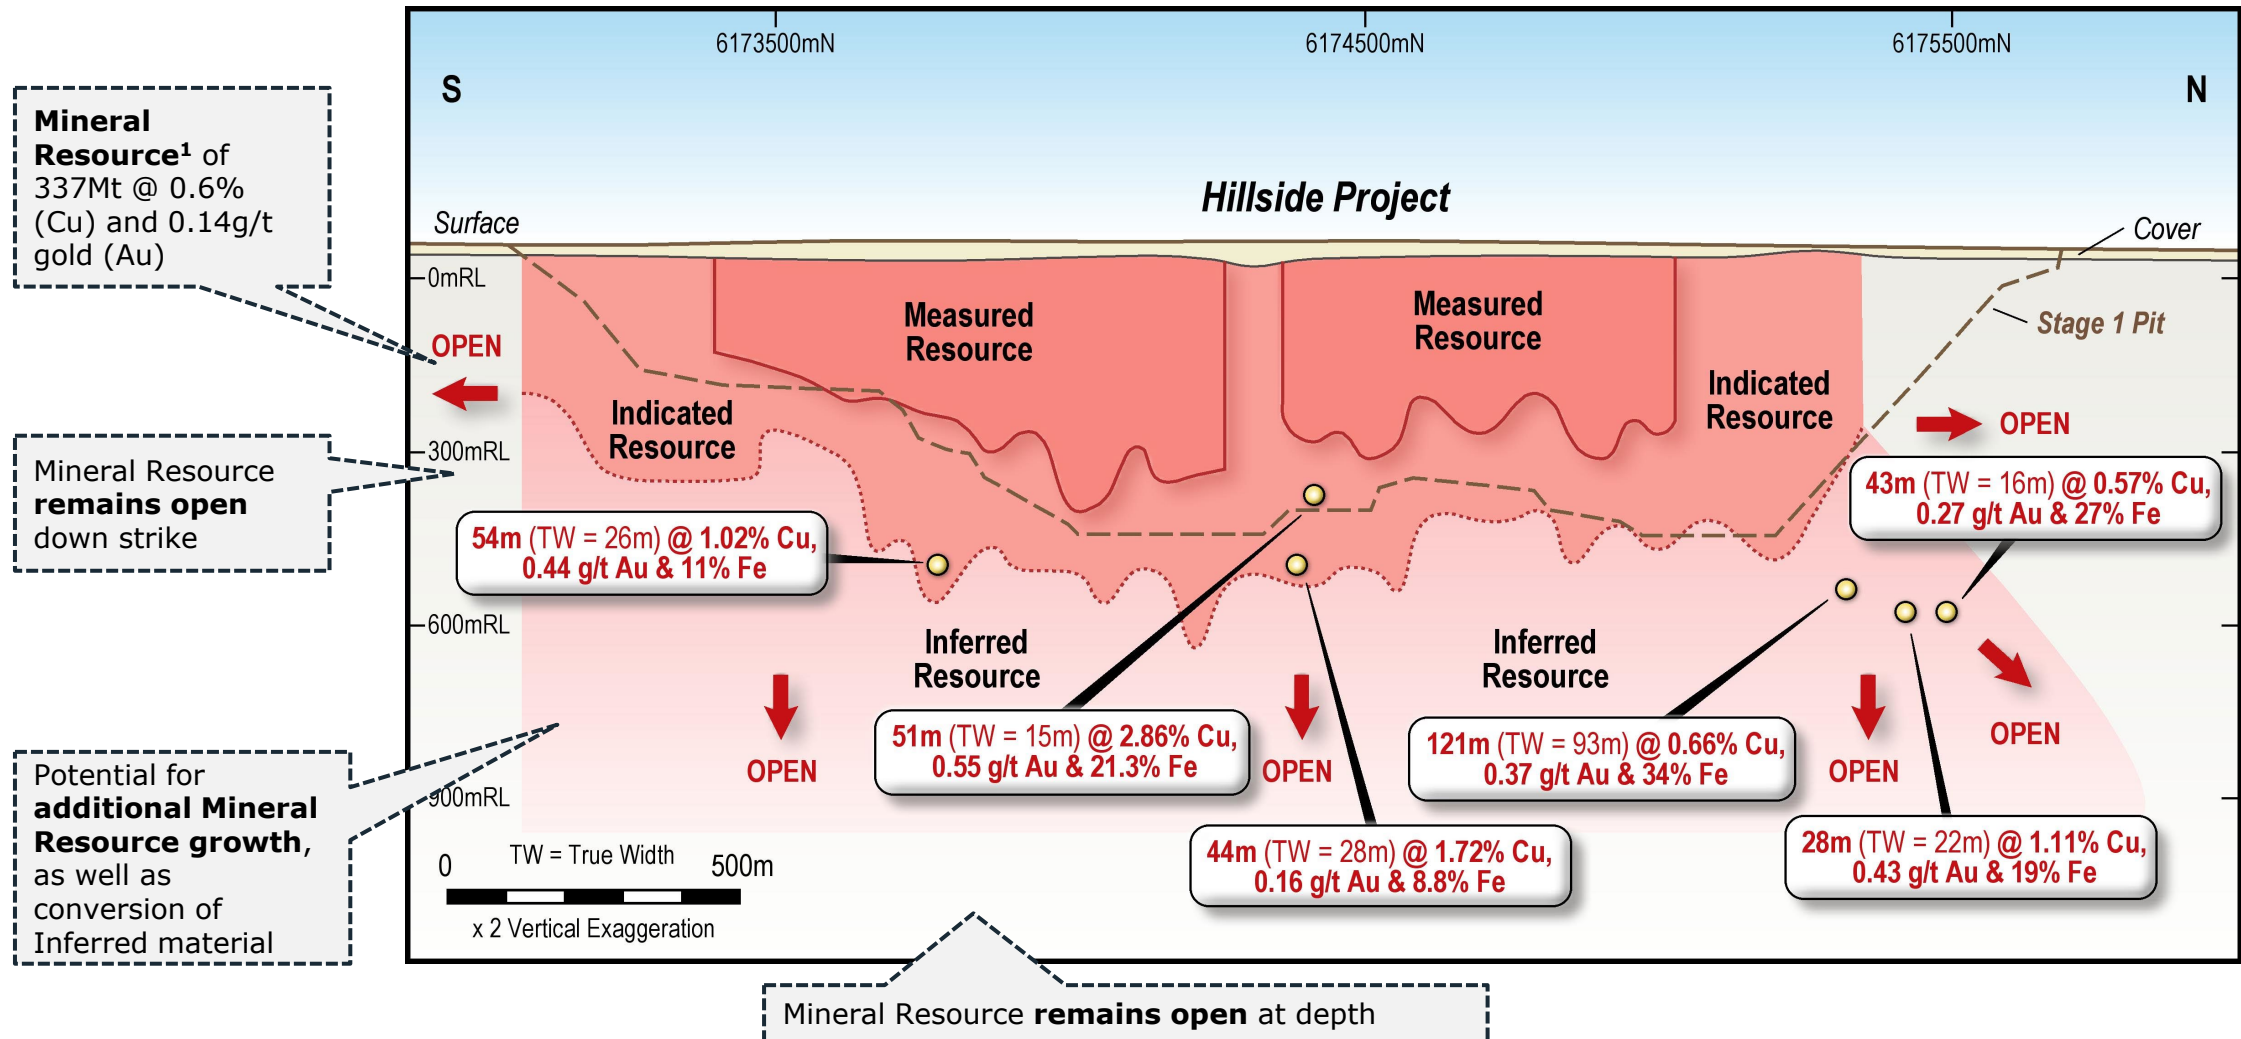

## Observations

- Dominant land position, eastern margin of the Gawler Craton
- 9 licences – 2,490km
- Shallow cover (<40m)
- Extensive targets supported by datasets including magnetics, gravity, Geochem & physics as well as drilling
- Yorke Peninsula cover is shallow, only 40m

# Ongoing growth and upside potential

1. Hillside Project - Mineral Resource and Ore Reserve Update (25 May 2015). Mineral Resources reported above a 0.2% cutoff. Measured and Indicated Resources are rounded up to two significant figures and inferred resources are rounded to one significant figure. Calculations have been rounded to the nearest Mt of ore, 0.01% Cu grade, 0.01g/t gold grade, 1,000t of Cu metal and 1000ozs of gold metal. Some apparent errors may occur due to rounding.

# Hillside Mine – Stage 1<sup>1</sup> Production Source

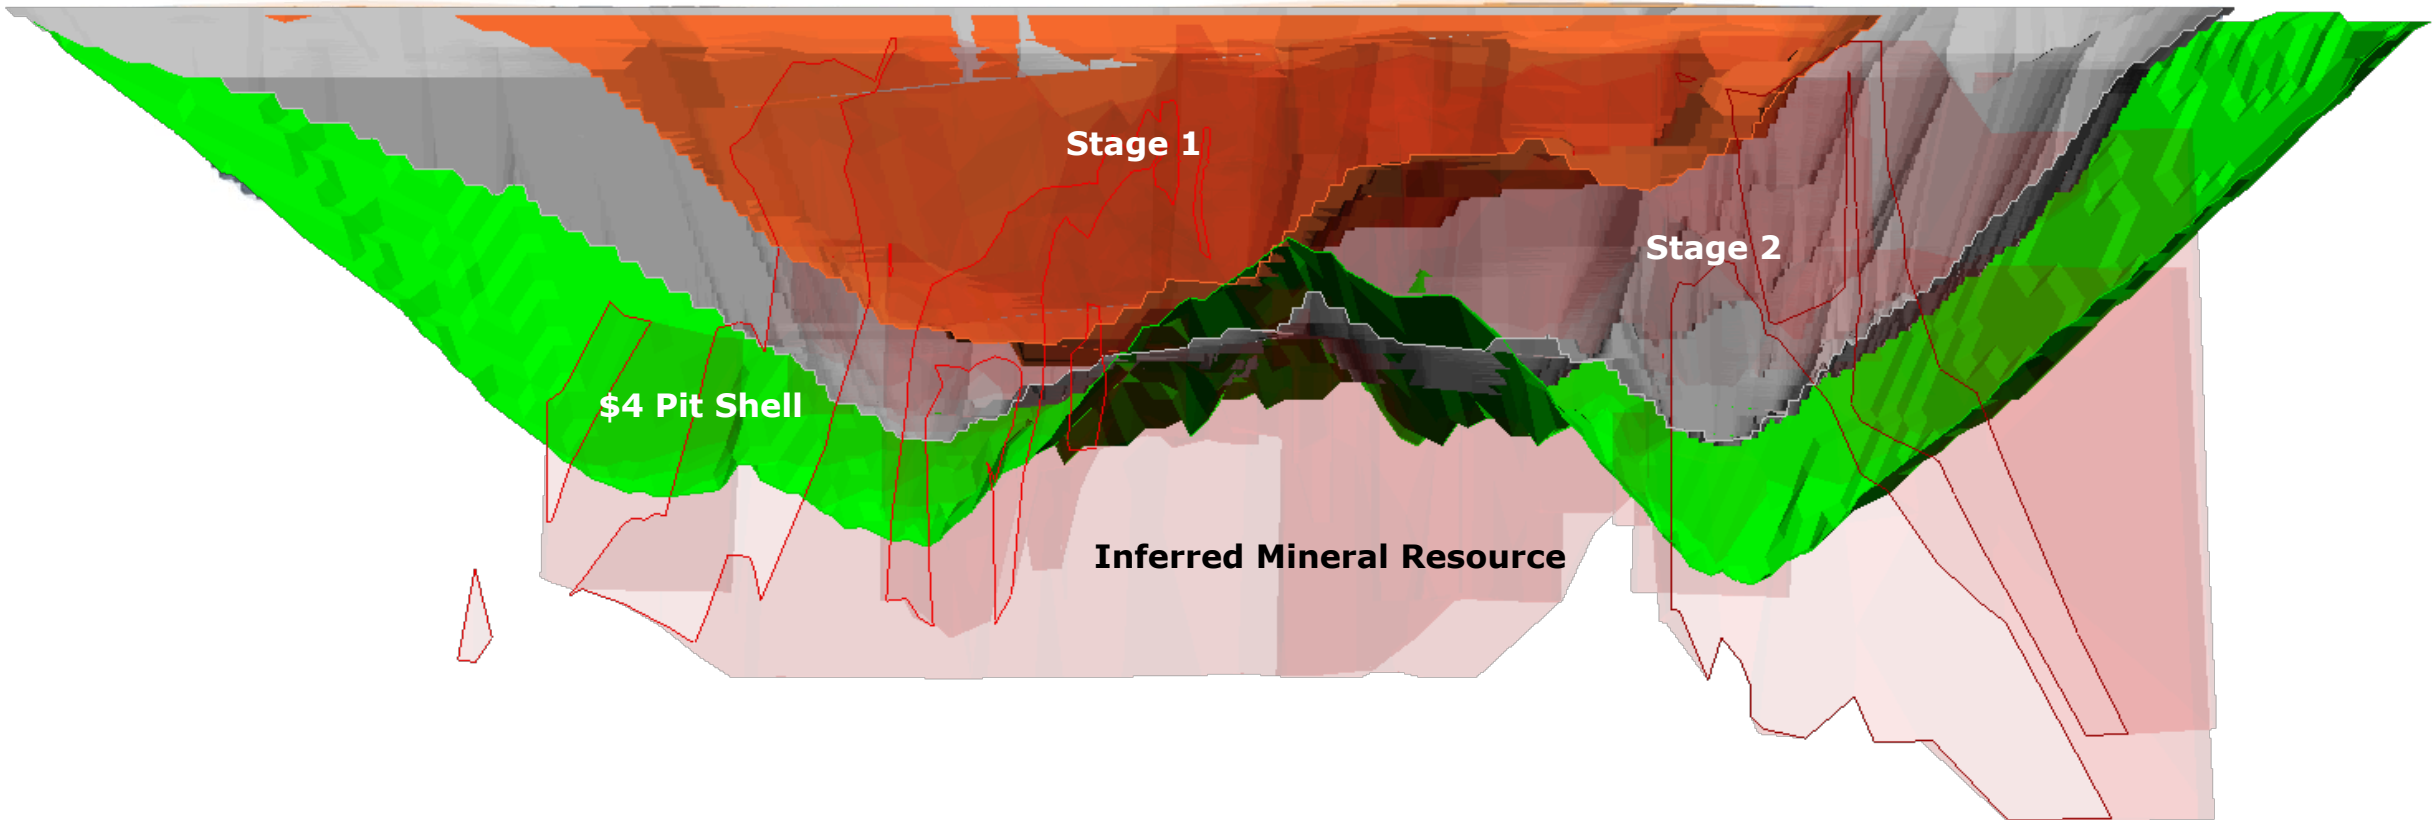

1. Hillside Project - Mineral Resource and Ore Reserve Update (25 May 2015).  
2. Rex doubles Hillside Ore Reserves (20 July 2021). Mineral Resources reported above a 0.2% cutoff.

# Hillside Mine – Stage 1<sup>1</sup> and 2<sup>2</sup>

1. Hillside Project - Mineral Resource and Ore Reserve Update (25 May 2015).  
2. Rex doubles Hillside Ore Reserves (20 July 2021). Mineral Resources reported above a 0.2% cutoff.

# Hillside Mine – Stage 1<sup>1</sup> and 2<sup>2</sup> and beyond

1. Hillside Project - Mineral Resource and Ore Reserve Update (25 May 2015).
2. Rex doubles Hillside Ore Reserves (20 July 2021). Mineral Resources reported above a 0.2% cutoff.

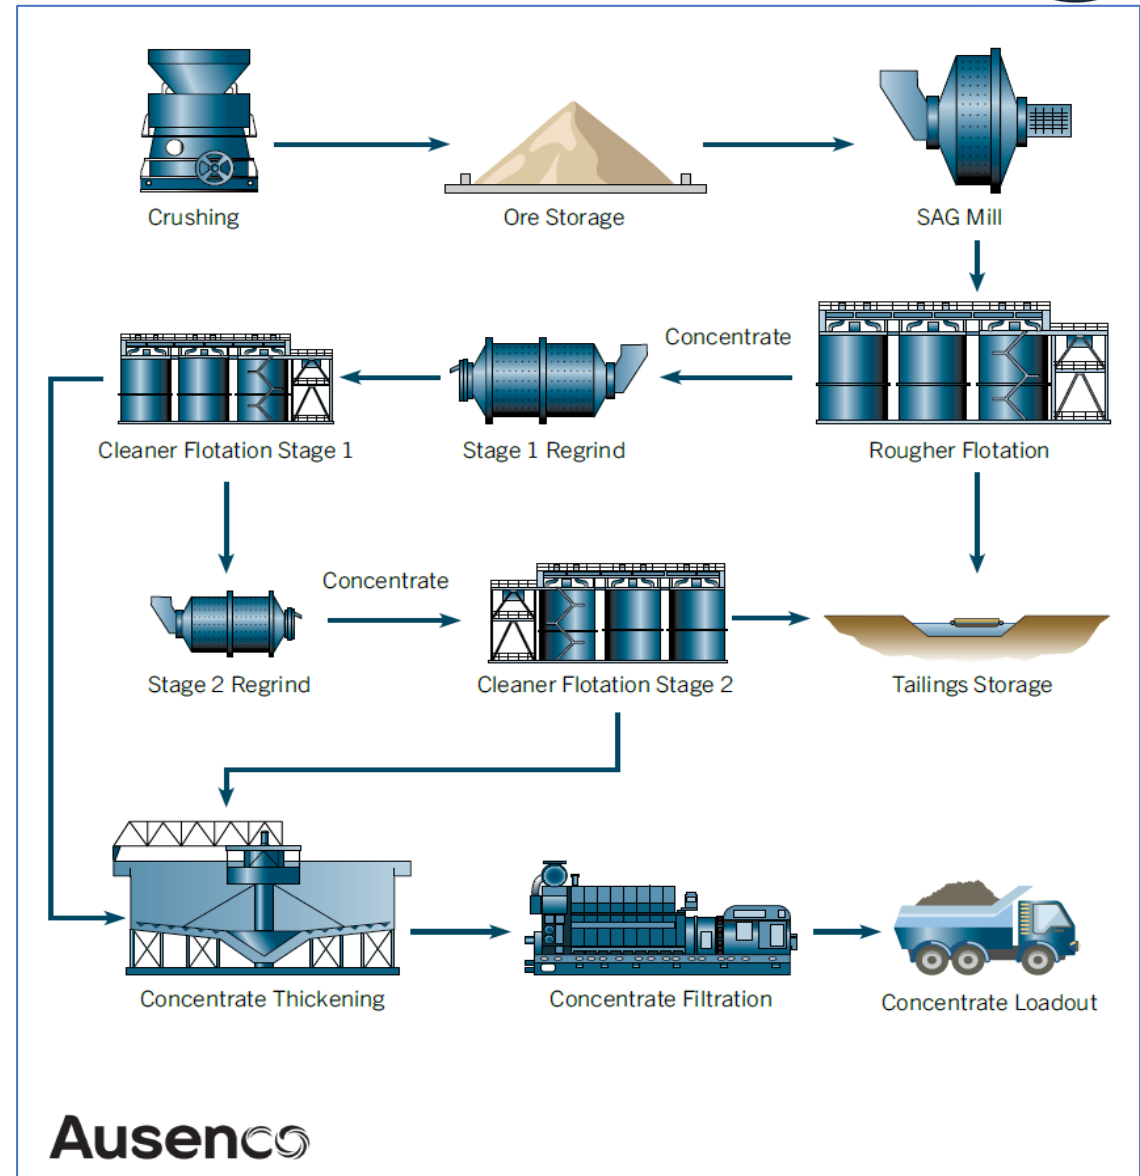

# Cross-section of interpretation from the recent Hillside 3D Seismic survey

# Processing overview

- Industry proven flow sheet, enabling rapid ramp up to production
- Gyrotory crusher feeding a Single SAG Mill, conventional flotation circuit to concentrate filtration
- Process control technology enables simplicity and flexibility of process operation
- Conservative design - sized for rapid production expansion
- Production of clean copper/gold concentrate suitable for all markets

# Actual Plant 3D layout – Design Improvements

# Upgraded jaw-gyratory crusher

## Why?

- De-bottle Neck
- Expansion capacity inbuilt
- Direct tip 300t Ultra class
- Coarse Grind – Hydrofloat
- Future Proofing

# Hillside Project Infrastructure

- The 132kV (Electranet) power network located within 10km of the site
- Stage 1, approximate demand 23MW, supplied from the South Australian grid

- An option for renewable solar behind the meter with a future battery storage is also being designed to optimise the site power requirements
- Hillside can underpin some of the current and future energy transition underway

- Water for processing [1.08Gl/a] will be sourced from local saline bores
- Negotiating further fresh water saving
- Top up potable water supplied by SA Water

- Concentrate will be road freighted from site to port (160km)

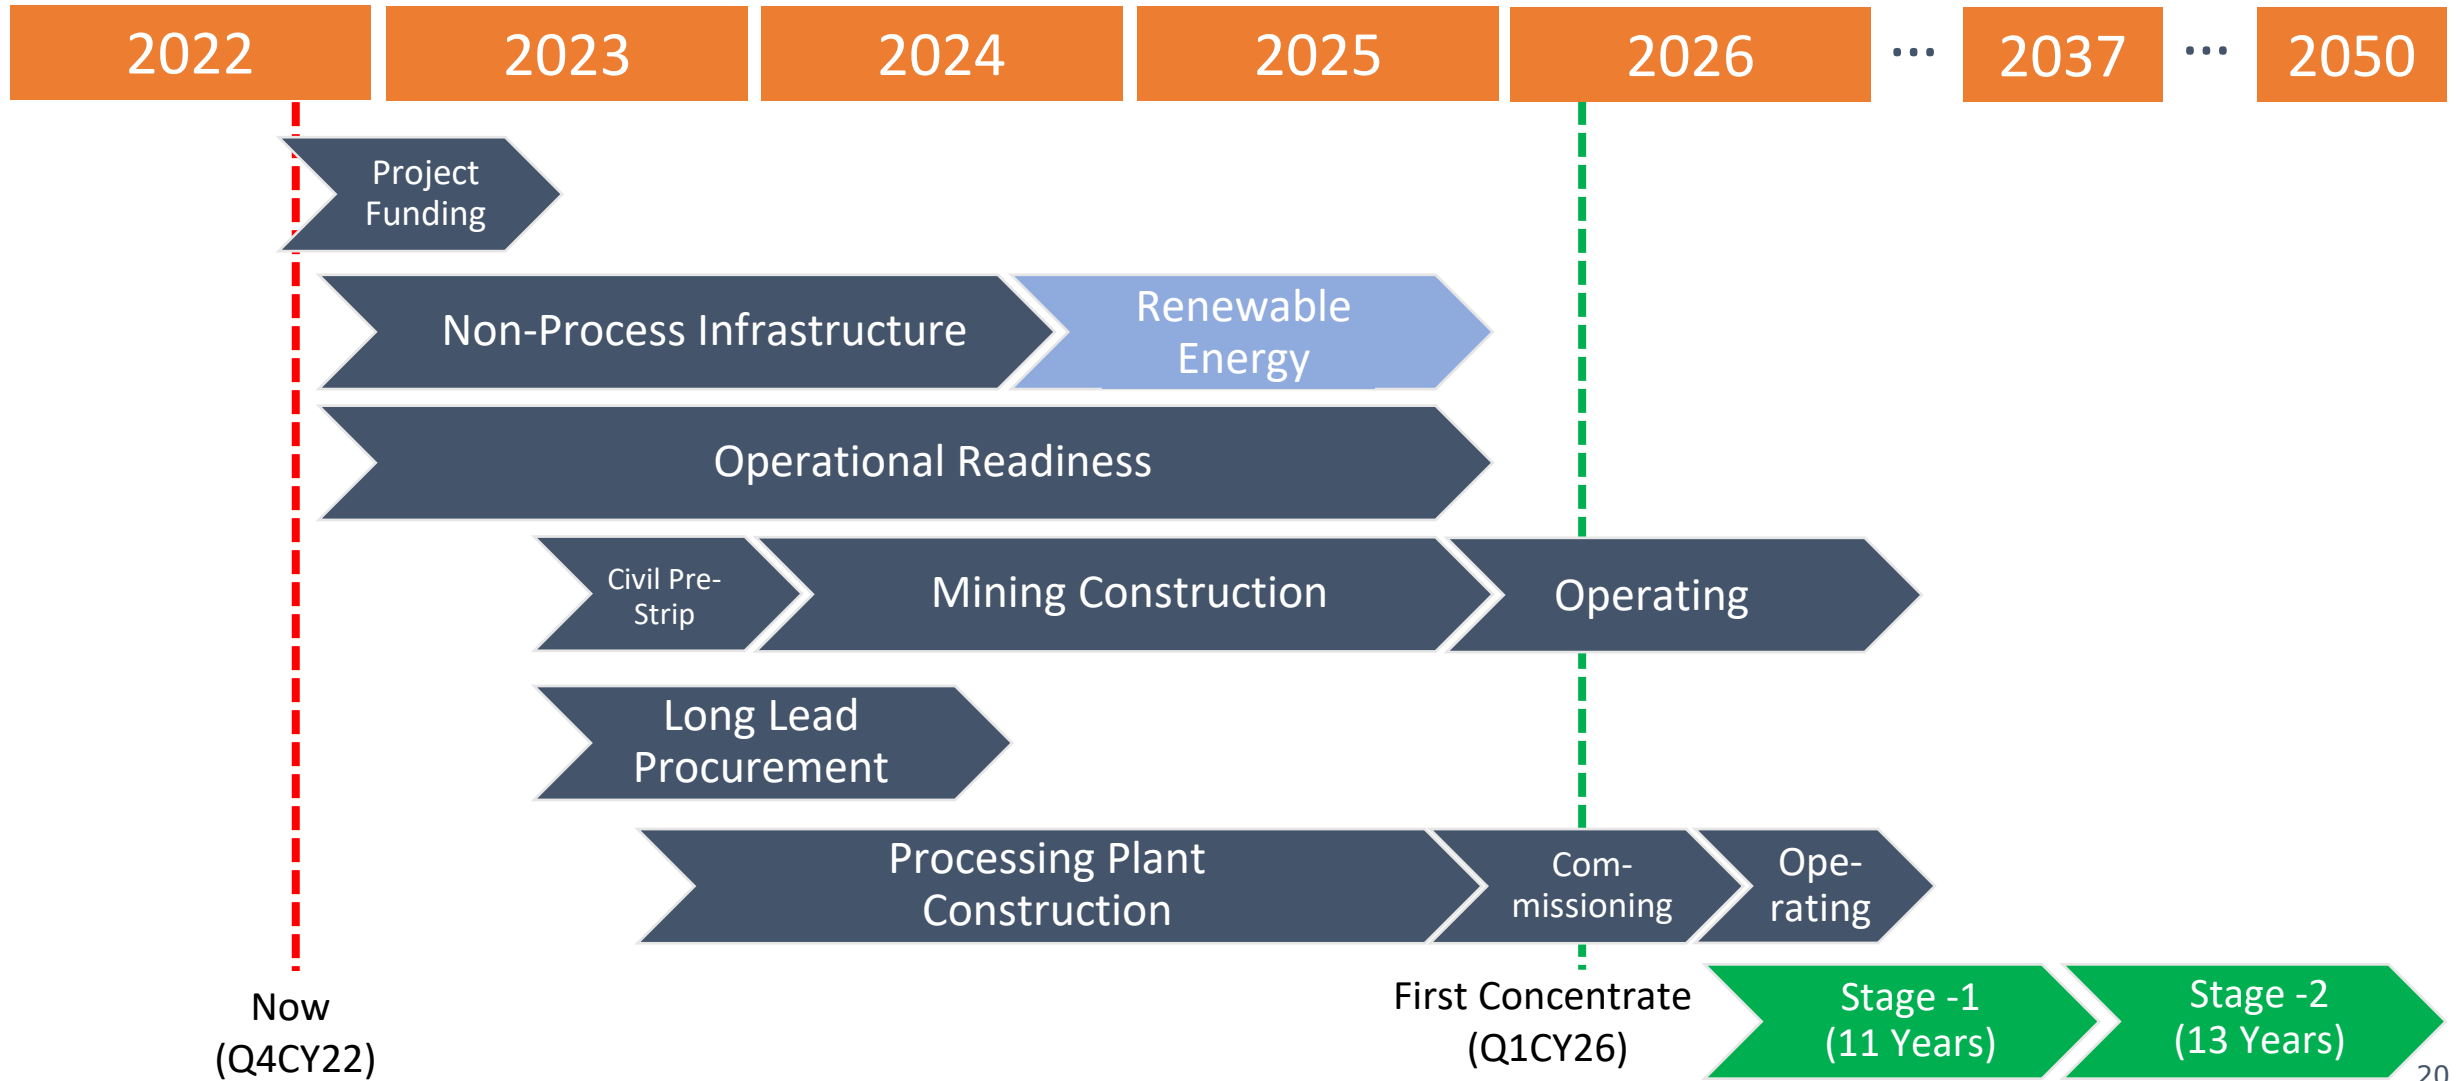

- The Project is located two hours by sealed highway from South Australia's capital city Adelaide, and major original equipment manufacturers (OEM) and suppliers
- A section of the Yorke Highway will be realigned so that it is beyond the 426m exclusion zone for mining operations

- A residential workforce is planned
- During construction, camp to be built near Ardrossan, approximately 12km away from Hillside.

# Hillside indicative updated development schedule

# ESG – Its what we do.

Rex is committed to operating in partnership with the local communities surrounding the Hillside Project and creating positive impacts, socially economically and environmentally

## Environmental

- No fragile or native forests threatened – land cleared for over 100 years.
- No water ways, tributaries, infrastructure threats
- Future land use options expanding to include renewable opportunities for the state.

## Social

- Transformative local employment opportunities
- Work with the Narungga Aboriginal community
- Yorke Townships – regional townships
- Multi decade Nation Building

## Government & Community

- Strong support from the Yorke Peninsula community with a formal Hillside Community Engagement Plan (CEP) in place
- Direct wages to employees and contractors to total over \$500m over 13 years
- Direct contribution to Gross State Product (GSP) of over \$2.0bn
- Investment in local infrastructure such as water, power and roads
- Direct workforce of ~430 people in addition to ~1,350 indirect employees

# Hillside: key catalysts & next steps

Rex Board and senior management are committed to delivering near-term catalysts for Hillside

**1** Delivery of final Updated and Optimised Feasibility and Definition Phase Engineering Study – time frame weeks

**2** Expansion of project delivery team and integration of Operational Readiness team continuing  
Site pre-development activities ramping up

**3** Secure Strategic investors/partners and committed debt funding: strong interest from a range of highly credentialed potential financiers and banking institutions. Strategic offtake options: numerous keen international counterparties.

**4** Secure long-lead capital items, based on Optimised Study and Detailed Engineering works currently underway.

**5** Stage 1 – Stage 2 &3 PFS update to begin.

**Hog Ranch**  
Unveiling a rapidly growing gold  
opportunity in Nevada

# Hog Ranch

Hog Ranch is a large-scale epithermal gold asset in Nevada, USA

## Overview

- Last mined by WMC<sup>1</sup> from 1988 to 1992
- Acquired by Rex in August 2019
- Contained gold resource increased from zero to 2.3Moz within 18 months of Rex ownership, at minimal cost of US\$0.69/oz
- Consists of several prospects; Bells (560koz), Krista area (1,580koz), Central Cameco/Airport (150koz), Gillam
- Large-scale soil sampling campaign underway with first round of results anticipated in the coming months
- Look-through multiples implied by the AngloGold Ashanti / Corvus transaction<sup>3</sup> implies a potential US\$100m+ valuation for Hog Ranch

1. Western Mining Corporation.

2. Hog Ranch Gold Resource increases from 1.4Moz to 2.2Moz (23 March 2021).

3. In September 2021, AngloGold Ashanti announced the acquisition of the remaining 80.5% stake in Corvus not already owned for C\$370m. Corvus is a TSX-listed gold and silver explorer and developer and focussed on the development of its gold-silver projects: North Bullfrog, Lynnda Strip and Mother Lode, all located in the Beatty District of Nevada, US.

## Mineral Resources<sup>2</sup>

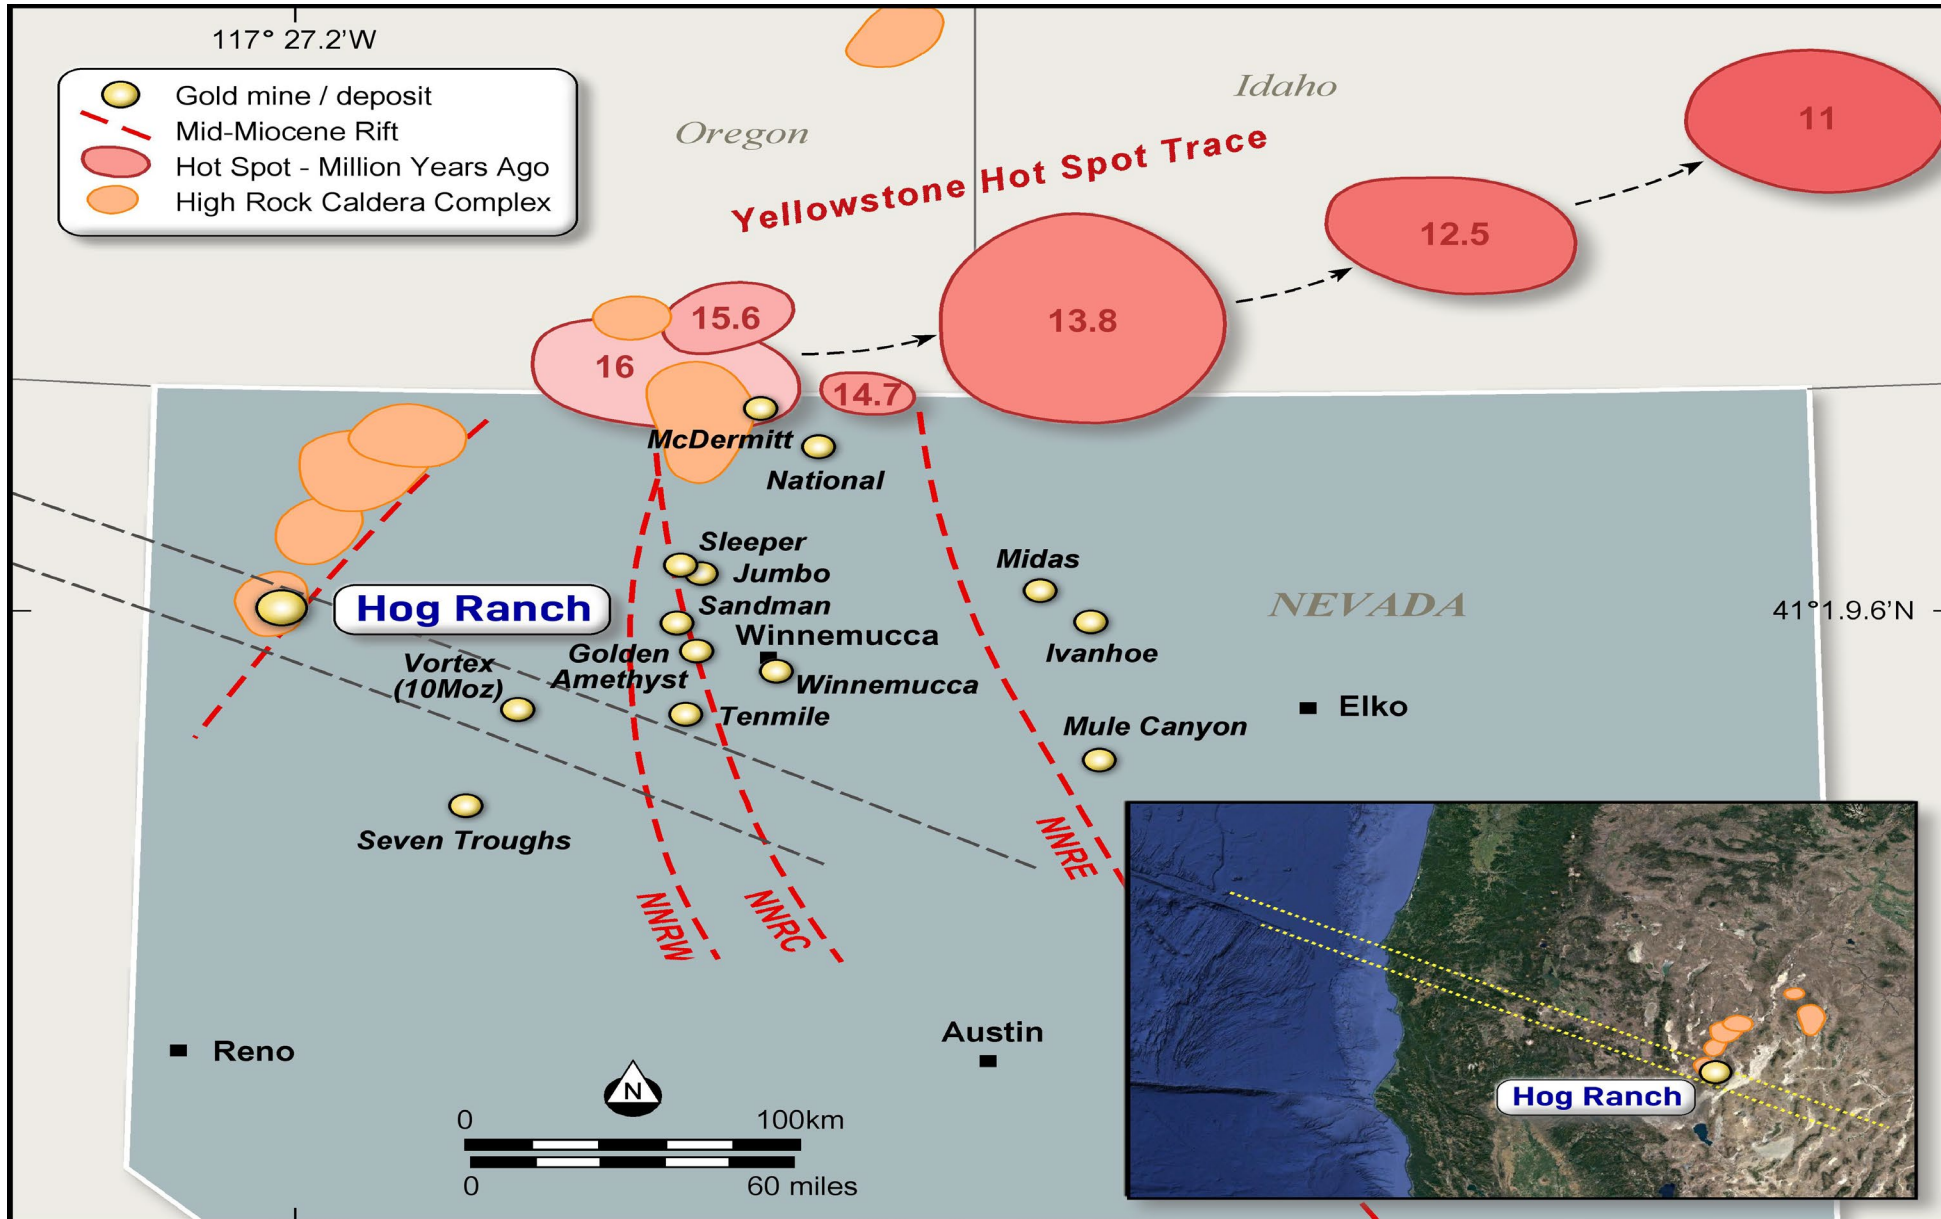

Category	Ore (Mt)	Au (g/t)	Au (koz)
Indicated	35	0.49	560
Inferred	130	0.41	1700
<b>Total</b>	<b>165</b>	<b>0.43</b>	<b>2,260</b>

## Resource growth

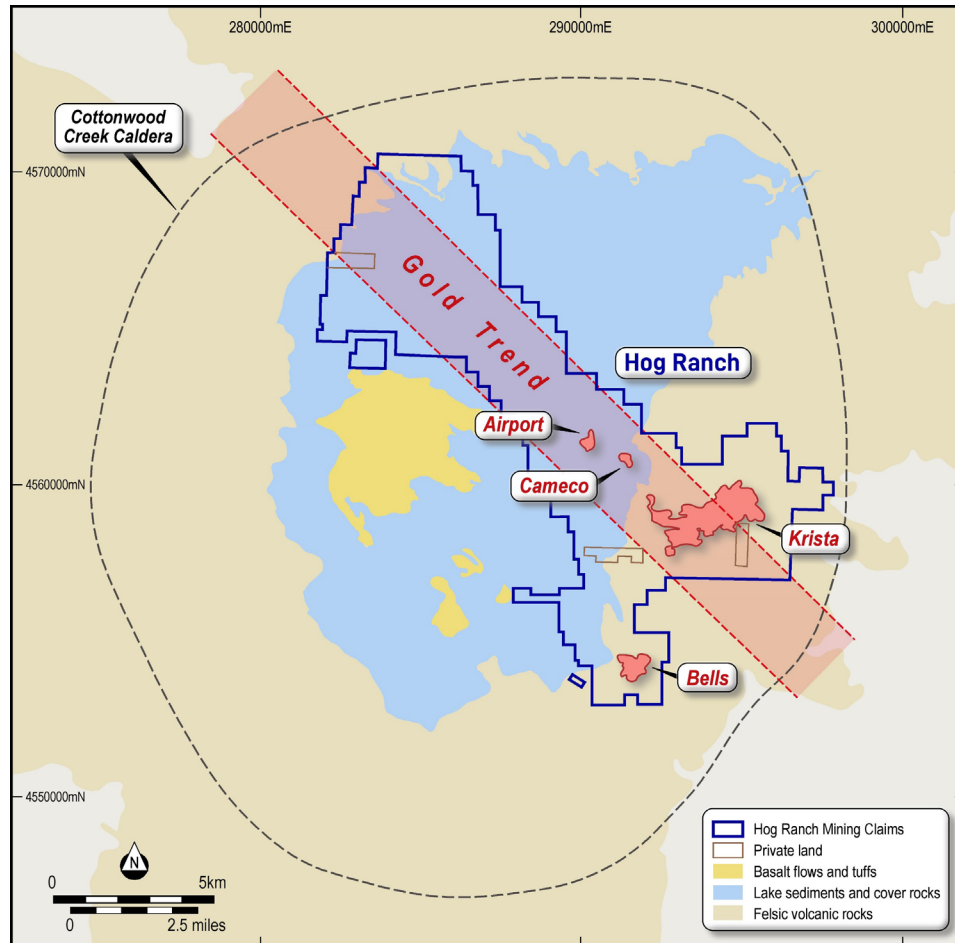

# How large can Hog Ranch be?

# Hog Ranch (cont.)

Hog Ranch is a large-scale epithermal gold asset in Nevada, USA

## Observations

- New datasets show overlapping evidence for large-scale epithermal alteration
- Interpreted to represent the footprint of a much larger gold system than previously understood

# Concluding remarks - Small C<sup>o</sup> with Large C<sup>o</sup> Assets

## Copper/Gold

## Gold

**Our Vision: "To produce the minerals needed for the world we all envision"**

# Rex's Board and management

The quality of the Hillside Project, has allowed Rex to attract a high quality Board and senior management team, with large-scale mining project development and operational expertise

## The Board and senior management

APPENDIX

# Hillside – supporting information

# The copper landscape

Hillside provides strong leverage to copper and the electrification thematic

- Demand outlook is fuelled by decarbonisation, electrification and the global transition to a green economy
  - Renewable energy technologies are 4x to 10x more copper intensive than conventional energy production
  - EV mass adoption will see EV sales grow at 28% p.a. between 2020-2025, with each EV requiring up to 5x times more copper than traditional ICE vehicles

## Green copper demand, by technology<sup>3</sup> (kt)

## Copper intensity in green scenarios<sup>2</sup>

2. Roskill (2021), Wood Mackenzie (2021), IEA (2021). 3. Broker research, Wood Mackenzie. 4. Macquarie Research.

# The copper landscape (cont.)

Hillside provides strong leverage to copper and the electrification thematic

- Market is fundamentally undersupplied as a result of a weak project pipeline:
  - Lack of new large-scale discoveries globally
  - Increased capital intensity to bring new operations into production due to depth, geological complexity and water scarcity
  - Trend of declining head grades
  - Massive increase in regulation and approval time frames

“  
*In the past six months, we have become increasingly concerned of a **stock-out episode in the copper market** as forward fundamentals have tightened even as price action has remained muted...*  
*Without any apparent softening adjustments already underway, we **believe higher prices are an inevitability***  
*Nicholas Snowdon, Metals Strategist, Goldman Sachs*  
 ”

Global copper market balance<sup>1</sup> (kt)

1. Macquarie Research.

# The copper landscape (cont.)

US \$60 trillion investment, spread over the three decades to 2050 across power, mining and metals, hydrogen, CCS and oil and gas

**We need to deploy multiple solutions to achieve net zero emissions by 2050**

Source: Wood Mackenzie 1) Includes CCS for Blue Hydrogen; 2) Direct air capture; 3) Nature-based solutions

# The copper landscape (cont.)

US \$400B capital required before 2030. It all seems implausible at best, and impossible at worst<sup>1</sup>

Source: Wood Mackenzie Corporate Service

1. Wood Mackenzie. "Have Miners missed the boat to invest and get ahead of the energy transition" - 11 July 2022

# ESG and Scope 3. Copper the right side of History

**1 Tonne of Cu from Hillside produces 3.64t of CO<sup>2</sup> Emissions, and reducing. That 3.64t of CO<sup>2</sup> can save an average of 3,500t of CO<sup>2</sup>**

Based on data from environdec, European Commission and Leonardo ENERGY

The copper industry has developed strategies that will both trigger and support substantial carbon reductions in the downstream industrial, residential and service sectors. By 2020, these strategies could deliver 130 million tonnes of CO<sub>2</sub> savings per year. This amount would grow steadily, and by 2050, total EU CO<sub>2</sub> emissions could be reduced by 25% – more than 1,100 million tonnes per year – relative to 2011 levels.

*"Copper can reduce EU CO<sup>2</sup> by 25% by 2050"*

# Hillside Mine

- Hillside is an Iron Oxide Copper Gold (IOCG) deposit
- Well defined geology
  - +800 drillholes, 240km of core
  - 2.3km north-south, 1,200m west-east
  - Open along strike and at depth
- Large ore zones
  - 6 main mineralised structures
  - Average true thickness of 27m
- Copper mineralisation from as shallow as 5m below surface
- 30 – 100m to be free dig
- Open at depth and along strike

# Hillside Processing

## Process Plant Designed at 6Mtpa

- Very clean concentrate of 27% copper @ 92% Cu recovery
- Very low arsenic <45ppm, low halides (F <100ppm & Cl <100ppm), low Uranium <45ppm

---

## Processing Metallurgy De-risked

Extensive batch, locked cycle and pilot plant testwork

---

## Tailings Dam

Down stream construction, integrated into the rock storage facility

---

## Conventional Copper Flotation

- Flotation feed P80 125 $\mu$  (first 2 years), 150 $\mu$  subsequent years
- Utilising the regrind, stage flotation and uranium kinetics to minimise uranium in final concentration
- Coarse grind testwork underway; provides optionality for further optimisation at minimal capex

---

## Saline Groundwater

- Saline groundwater supplemented by seawater used in the flotation circuit
- Filtered concentrate washed with potable water to remove vestigial seawater

---

## Low Processing Operating Costs ~US\$7.5/ore tonne

---

Rex concentrate from pilot plant test program, using actual Isa Mill

# Hillside

## Stage 1 Mining Plan

### Progressive Rehabilitation

- Mineral Lease is 2998Ha, 1283Ha will be disturbed Stage 1
- 97% of the land had been cleared for agriculture
- Replacement of top soil and subsoil starts within first year of clearing
- By the time pit is complete in Year 12, 65% of final rehabilitation by area is complete.
- 65% of the land is returned to broad acre cropping
- Pit lake does not require rehabilitation (12% of the disturbed area)

Total Cover Type	Area (ha)	Percentage of Final Landform
Native grasses/salt bush/salt tolerant species	168.4	16%
Agricultural (cropping)	770.1	60%
Native vegetation	129.9	13%
Agricultural (other)	57.0	5%
Land that will not be rehabilitated (remaining open pit void, retained roads)	157.3	12%
<b>Total</b>	<b>1,282.7*</b>	<b>100%</b>

\* Noting that this is 13.2ha greater than the area of disturbance identified in Table 3-3 due to the greater area of RSF slopes than disturbance footprint.

**Hillside Project**

- Hillside Mineral Lease ML 6438
- Miscellaneous Purposes Licence MPL 146
- Extractive Minerals Lease EML 6439

**Potential Land Use Options**

- Native grasses/salt bush
- Agriculture (crop)
- Native vegetation
- Agriculture (other)
- EFS pit outline

<b>Proved</b>	58	0.52	0.16	301	308
<b>Probable</b>	123	0.56	0.13	687	515
<b>TOTAL</b>	<b>182</b>	<b>0.54</b>	<b>0.14</b>	<b>988</b>	<b>823</b>

1. Hillside Project - Mineral Resource and Ore Reserve Update (25 May 2015). Mineral Resources reported above a 0.2% cutoff. Measured and Indicated Resources are rounded up to two significant figures and inferred resources are rounded to one significant figure.

2. Rex doubles Hillside Ore Reserves (20 July 2021).

3. Calculations have been rounded to the nearest Mt of ore, 0.01% Cu grade, 0.01g/t gold grade, 1,000t of Cu metal and 1000ozs of gold metal. Some apparent errors may occur due to rounding.

# Supplementary Information

## Compliance statement

With reference to previously reported Mineral Resources, Ore Reserves, Feasibility Studies and Scoping Studies the Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements as referenced as footnotes to each relevant slide.

In the case of estimates of Mineral Resources and Ore Reserves that references material assumptions and technical parameters underpinning the information contained within this Presentation continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement. The estimated Ore Reserves and Mineral Resources underpinning any production target have been prepared by a competent person in accordance with the requirements in Appendix 5A (JORC code).

## Base case assumptions – Hillside Project

Price assumptions for the life of the operation are: Copper US\$3.00/lb; Gold US\$1,550/oz. An exchange rate assumption of \$0.70 was used for the life of the operation. Unless otherwise stated, all dollar amounts given are in Australian dollars and are not subject to inflation/escalation factors.

## Hillside Project basis of C1 and all-in sustaining cost

C1 (Direct Cash Cost)= Mining + Processing + Site general and administration + Concentrate freight + Refining charges – By-Product credits (net)

All-In Sustaining Cost (AISC) = C1 + Royalties + Rehabilitation + Sustaining capital

All-In Cost = AISC + Pre-production capital

All costs calculated in accordance with Australian Accounting Standards and International Financial Reporting Standards.

# Supplementary Information (cont.)

## Competent persons' statements

The information in this report that relates to Exploration Results or Mineral Resources is based on, and fairly reflects, information compiled by Mr Steven Olsen who is a Member of the Australasian Institute of Mining and Metallurgy and is an employee of Rex Minerals. Mr Olsen has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Olsen consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

The information in this report that relates to mining and/or Ore Reserves is based on, and fairly reflects, information compiled by Mr Charles McHugh who is a Fellow of the Australasian Institute of Mining and Metallurgy and is an employee of Rex Minerals. Mr McHugh has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr McHugh consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

The information in this report that relates to metallurgy is based on, and fairly reflects, information compiled by Mr John Burgess who is a Fellow of the Australasian Institute of Mining and Metallurgy and a consultant to Rex Minerals. Mr Burgess has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Burgess consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

## Base case assumptions – Bells Project

The Bells Scoping Study (2020) price assumptions are quoted in US dollars and Gold US\$1,550/oz.

## Bells Project basis of C1 and all-in sustaining cost

AISC and AIC calculated in accordance with 2018 WGC Guidance Note Update and IFRS 16, effective 1 January 2019.

C1 (Direct Cash Cost) = Mining + Processing + Site general and administration + Refining charges

All-In Sustaining Cost (AISC) = C1 + Royalties + Production tax + Rehabilitation + Sustaining capital

All-In Cost (AIC) = AISC + Pre-production capital + Equipment leasing costs
